obtaining second transform conditions, **each of which corresponds to a respective one of the plurality of image sensing devices, based on each of coordinate systems of the image sensing devices and a coordinate system of a virtual image sensing device;**

calculating, for each of the image sensing devices, a respective orientation of the virtual image sensing device at the predetermined image frame based on the first and second transform conditions;

calculating, based on the calculated orientations of the virtual image sensing device, correction transforms each of which is for reducing a shakiness of respective image sensing devices at the target image frame;

composing a panoramic image using images sensed at the target image frame by the plurality of image sensing devices; and
